

Serial No.

said information sending means of said main device sends the information to said remote controller device at an information sending destination after appending the identification code of said remote controller device to the information; and

A2  
said remote controller device further includes display disabling means for, when the information sent from said main device to said display means is not appended with its own identification code, disabling display of the information.

---

7. (Amended) The network apparatus according to [any preceding claims 1 to 6] claim 1, wherein

said main device and said remote controller device communicate with each other by means of infrared rays.

---

Please add new claims 8-20 as follows:

A3  
--8. The network apparatus according to claim 2, wherein said display means of said remote controller device includes:

title displaying means for displaying a title of the information sent from said main device.

9. The network apparatus according to claim 3, wherein  
said display means of said remote controller device  
includes:

title displaying means for displaying a title of the  
information sent from said main device.

AB  
10. The network apparatus according to claim 2, wherein  
said display means of said remote controller device serves as  
means for, when the title displayed on said title display means  
is specified, displaying the information corresponding to the  
title specified.

11. The network apparatus according to claim 3, wherein  
said display means of said remote controller device serves as  
means for, when the title displayed on said title display means  
is specified, displaying the information corresponding to the  
title specified.

12. The network apparatus according to claim 2, wherein:  
said information sending means of said main device  
sends the information to said remote controller device at an  
information sending destination after appending the  
identification code of said remote controller device to the  
information; and

00000000000000000000000000000000  
AB

said remote controller device further includes display disabling means for, when the information sent from said main device to said display means is not appended with its own identification code, disabling display of the information.

13. The network apparatus according to claim 3, wherein:

said information sending means of said main device sends the information to said remote controller device at an information sending destination after appending the identification code of said remote controller device to the information; and

said remote controller device further includes display disabling means for, when the information sent from said main device to said display means is not appended with its own identification code, disabling display of the information.

14. The network apparatus according to claim 4, wherein:

said information sending means of said main device sends the information to said remote controller device at an information sending destination after appending the identification code of said remote controller device to the information; and

said remote controller device further includes display disabling means for, when the information sent from said main

device to said display means is not appended with its own identification code, disabling display of the information.

15. The network apparatus according to claim 5, wherein:

    said information sending means of said main device sends the information to said remote controller device at an information sending destination after appending the identification code of said remote controller device to the information; and

    said remote controller device further includes display disabling means for, when the information sent from said main device to said display means is not appended with its own identification code, disabling display of the information.

16. The network apparatus according to claim 2, wherein

    said main device and said remote controller device communicate with each other by means of infrared rays.

17. The network apparatus according to claim 3, wherein

    said main device and said remote controller device communicate with each other by means of infrared rays.
